

Subject: Human and Social Biology
Class: Form 4
Date: 9th April 2020

Namaskar my babies 

I trust you are having a balanced diet; taking your vitamins , exercising and having enough sleep in order to have a strengthened and effectively functioning immune system as we face this global pandemic. We did speak a lot about diseases and viruses in our sessions and how they can be spread, but by no means did we request a practical demonstration!!!

Anyways thanks to technology I can still get work to you .
So in preparation for your upcoming end of term examinations, I'm kindly requesting the following be done for this week. You will be given continuous instructions as the weeks go by for various topics.

This week we will cover digestion
So from study guide pages 36 and 37, kindly read objectives and chapter along with key points

Correspondingly you are required to study pages 87 to 107 from the Macmillan text.

Emphasis must be placed on practical activities, charts and diagrams.

Afterwhich the following must be completed

Multiple choice 1 to 10 on page 104 to 105 Macmillan text

Followed by questions 12,14,15,16,17 and 20- pages 105 to 106 Macmillan text.

You will be required to present your responses orally and submission to be marked on the resumption of classes.

With much thanks

Tresha ji

Do continue to stay safe.
